Orig Pub : Chem. listy, 1956, 50, No 2, 320-322; Sb. chekhosl.  
khim. rabot, 1956, 21, No 4, 1078-1081

Abstract : Description of a cryostat which is a modification of the  
cryostat of Justi (Justi E., Z. Phys., 1934, 35, 1),  
equipped with induction heating of the mercury block.  
Increased efficacy of heating and improved regulation  
are attained by the use of high frequency current of  
evenly varying frequency. The supplied intensity of  
the heating current is automatically controlled; the  
regulating responsive device is a tensimetric thermome-  
ter . The cryostat is suitable for determination of the  
adsorption of gases at solid adsorbents at low temperatu-  
res.

isosteres are linear in the entire temperature range, and at  $\theta > 0.95$ , there occur on the isosteres, at a fixed temperature, breaks which split them into two linear parts. From the dependence on  $Q$ , conclusions may be drawn regarding the surface characteristic, the interaction of the adsorbed molecules, and from the breaks - conclusions regarding the phase changes of the adsorbed layer. The temperatures  $T_0$  and heat values of the phase transitions have been determined. The potential adsorbent field affects the  $T_0$  value. SOURCE: Revista de chimie, v. 17, no. 1, 1966, 28-31

TOPIC TAGS: chemical laboratory instrument, gas flow

ABSTRACT: The authors report the experimental results obtained with a direct-bubbling multi-tube saturator. The functional characteristics of the apparatus, i.e., variation of the vapor/gas ratio, degree of saturation and thermic yield in terms of the liquid level, thermic charge and gas flow, were determined and a method for selecting the most economical operating parameters is outlined. TITLE: Comparator circuit. \CZ Pat. No. PV 4158-65, Class 21

SOURCE: Vynalezky, no. 3, 1966, 14

TOPIC TAGS: electric engineering, electric measuring instrument, electric polarization, voltage divider, electronic circuit

ABSTRACT: A circuit of a comparator with a floating input is proposed for distinguishing the polarity of the voltage division between a measured and a compensation voltage. It generates commands to control the compensation voltage value. Beginning at the point of input of the comparator, where the division between the measured and compensation voltages is created, the following are connected in (the following order) series: the contact of a controlled, e.g., vibration, modulator; the primary winding of an insulating transformer; a resistor, a capacitor, and one terminal of the balanced input of the amplifier are connected in parallel to the secondary winding of the transformer. The output of the amplifier is connected via a gate circuit to the output terminal of the entire circuit. In addition, the amplifier is damped by a stabilizing feedback with a control switch and integrating network. The multi-vibrator output is connected to the controlling input of the switch. In addition,

Card 1/2

ACC NR: AP6022438

the multivibrator output is also connected via a shaping circuit to the modulator's modulation input, and via a second shaping circuit to the controlling input of the gate circuit. Registered, June 28, 1965 (PV 4158-65).

Wusatowski Z., Hoderny B. Elongation and Spread during Hot Rolling of Low Carbon Steels with High Draughts. 11

"Wydłużenie i rozszerzenie przy walcowaniu na gorąco dużynd gniotami emiękkiej stali". Archiwum Hutnictwa (PAN), N. 3, Warszawa, 1958, pp. 181-179, 6 figs., 13 tabs.

Using the equipment of the Iron Metallurgy Institute, experiments were carried out on hot rolling low carbon steels under high draughts from 50 up to 90%. For the experiments cross sections of  $20 \times 20$ ,  $15 \times 100$  and  $10 \times 110$  mm. were rolled at  $900^\circ$ ,  $1000^\circ$  and  $1200^\circ\text{C}$ . The tests were performed on a somewhat large scale and simultaneously a series of parameters were measured: elongation, spread, forward slip, the velocity of rolling, pressure and torque of rolling. Metallographic investigations were also conducted in addition to the other investigations. In this work, only a part of the measurements mentioned above were taken into account. Namely the data concerning changes in the width and length, and changes in the thickness which needed to determine the relation of the coefficient of spread and elongation as a function of the draught coefficient:  $\beta = \gamma^{-W}$  and  $\lambda = \gamma^{(W-1)}$ . These relations are derived on the basis of a method formerly applied by one of the present authors. The results of these investigations gave very similar relations  $\beta = \gamma^{-W_1}$ ,  $\lambda = \gamma^{(W_1-1)}$ , where  $W_1 = -10^{-1.357}$ .

$\epsilon_w = 0.9678 \cdot \ln \left( \epsilon_w = \frac{h_1}{D}, \lambda_w = \frac{h_1}{b_1} \right)$ ,  $b$  = width of the steel specimen;

$h$  = weight of the steel specimen,  $D$  = cross section of the roll. For purposes of verification; the differences between the real width (measured) and those from the relation were calculated. The calculations

Wosolowski 2.

$j$  showed that for  $\frac{b_1}{h_1} > 2$  the results are satisfactory, but for ratios 4  
smaller than 2 the error is relatively great and supplementary tests 2  
and investigations appear to be desirable.

"Data on the Diminishing Effect of Hyaluronidase on Exophthalmus."

Budapest, Orvosi Hetilap, Vol 104, No 14, 7 Apr 63, pages 631-634.

Abstract: [Authors' Hungarian summary] Single i.m. doses of 150 U Hyason were given to 19 exophthalmic patients in 24 instances. 16 progressive, 3 non progressive cases of exophthalmus were included in the study. Six hours after the injection, 1.5-5 mm decrease of the Hertel-values was noted in 11 cases. In 3 cases the eye-lid swelling decreased and a decrease of the pressure in the eye-region was noted by the patients. No unpleasant side effects were observed. Attention is called to the beneficial influence of i.m. Hyason on the eye in cases of acute decompensation of endocrine exophthalmi. The possible ways of the action mechanism are discussed by the authors. 5 Hungarian, 2 Western references.

TITLE: Electron-microscopic structure of the pituitary transplanted into the anterior chamber of the eye /This paper was presented at the 29th Meeting of the Hungarian Physiological Society held in Szeged from 2 to 4 July 1964/

SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 26, Supplement, 1965, 49

TOPIC TAGS: electron microscopy, histology, animal physiology, endocrinology, gland, hormone, rat

ABSTRACT: Homologous adenohypophysis, transplanted into the anterior chamber of the eye of male albino rats, was examined 50 days after transplantation and later. The transplanted organ underwent significant structural and cellular changes but the presence of every normal type of cell could be demonstrated by electron microscopy. The

Card 1/2

L 15501-66

ACC NR: AT6007447

cell ratio underwent a change in the transplants as the elements containing granules characteristic of the acidophilic mammotropic cells gained preponderance. It was demonstrated earlier by functional studies that the transplanted hypophyses secreted luteotrophin. The pituitary cells, especially near the blood vessels, possess well-developed and regular endoplasmic reticulum characteristic of active function, and they often contain maturing granules. The results appear to indicate that the GOLGI apparatus, too, has a role in the production of the secretory granules. [JPRS]

SOURCE: Vynálezy, no. 10, 1966, 25

TOPIC TAGS: metal cutting, jet nozzle, metalworking tool

ABSTRACT: Equipment is described for cutting by means of a jet of liquid, e.g., of water, distinguished by a pressure chamber in the base of the apparatus, equipped with an inlet spring valve and an outlet fitted with a jet nozzle. The chamber is sealed by a diaphragm, on the outer side of which lie jointed segments of pipe swivelling on joints fixed to the diaphragm sleeve. In recesses there are plates clamped by another sleeve, by a bearing plate and the lid of the apparatus, in which there is a sliding control for draw bars connected to the end of a long arm from the jointed segments.

TITLE: Measurement of asymmetry in electric power distribution systems

SOURCE: Elektrotechnicky obzor, v. 54, no. 10, 1965, 478-479

TOPIC TAGS: electric power transmission, electric current, electric network

ABSTRACT:

The average values of current and voltage asymmetry, measured at 14 points of the Czechoslovak power system over a period of three years, are tabulated. Certain important mutual relations are derived from the measured values, and it is proved that attention must be paid to the present state of asymmetry, in particular in networks of 22 kV and less. Orig. art. has: 4 figures, 5 formulas, and 1 table. [JPRS]

Title : Determination of Silicic Acid by the Modified Classical Method, Particularly for Purposes of Analysis of Various Materials in Metallurgical Laboratories.

Orig Pub: Vest. Slov. kem. drustva, 1957, 4, No 1-2, 1-5.

Abstract: A quick factory method of determination of  $\text{SiO}_2$  in fire-resistant materials, slags, iron and steel is described. A well-ground sample (0.5 g.) is moistened with water and evaporated for 20-30 minutes in a water bath, until dry, with 15-20 ml. of  $\text{HCl}$  (1:1) and a few small crystals of  $\text{KClO}_3$ .

Abstract: The dry residue is heated for 15 more minutes. 20 ml. of HCl heated up to 70°, 5-10 ml. of 3% H<sub>2</sub>O<sub>2</sub> and 80 ml. of water, heated up to 80° are successively added. The deposit is filtered, washed with warm water containing some H<sub>2</sub>O<sub>2</sub>, calcinated, weighed, evaporated with HF, recalculated and weighed again. In case of analysis of metals, the sample in the form of chips (2 g.) is dissolved in 20-25 ml. of HCl and then the procedure described above is followed (the residue is dried at 135° during one hour). -- N. Turkevich.

"Heat Exchange Between  $n$  Fluids."

Bucharest, Revista de Chimie, Vol 17, No 3, Mar 66, pp 155-159.

Abstract [Author's English summary modified]: A mathematical analysis of the generalized problem of the heat exchange between  $n$  fluids. The formulae derived allow the determination of the temperature situation resulting from heat exchange between  $n$  fluids in terms of the transport constants, the product of the flow and specific heat of each fluid, and  $n$  distinct boundary conditions. Fluids circulating in uniform flow or in counterflow are considered.
